

Thursday

National Weather Service Water Resources

The NWS homepage, www.weather.gov, provides up to date weather and water advisory, watch, and warning information for the U.S. and its territories. However, the NWS provides many additional resources to help emergency managers, public officials and private citizens make water decisions.

Advanced Hydrologic Prediction Service (AHPS)

AHPS provides a suite of river and flood forecasts and water information to protect life and property and helps ensure the nation's economic well-being. water.weather.gov

Flood Inundation Mapping

The ability to look into the future to see how many city blocks and roads might be flooded is becoming clearer with flood inundation mapping. NOAA's NWS and National Ocean Service are collaborating with the USGS, USACE, FEMA and other partners to develop these inundation maps for flooding.

Weather Prediction Center (WPC) Precipitation Forecasts

WPC provides precipitation forecasts for the entire U.S., including Puerto Rico. WPC also issues excessive rainfall forecasts, short-range discussions on heavy rainfall events, and snowfall and freezing rain probabilities. www.wpc.ncep.noaa.gov/

NWS River Forecast Centers (RFCs)

The National Weather Service has a network of thirteen RFCs across the United States. These RFCs collect, process, and provide water resource and river forecasts and information for major river basins across the country. <http://water.weather.gov/ahps/rfc/rfc.php>

Flood Safety Awareness Website

On this page, you will find information on what to do before, during and after a flood.

www.floodsafety.noaa.gov

Staying aware of an evolving weather situation can help you prepare when flooding or other weather hazards impact your area. Be a Force of Nature! www.nws.noaa.gov/com/weatherreadynation/

Join us tomorrow on the final day of flood safety awareness week to find out about some great flood resources offered by several NWS partners!
